SENCORE
TC 131 SEMI-AUTOMATIC
TUBE CHECKER

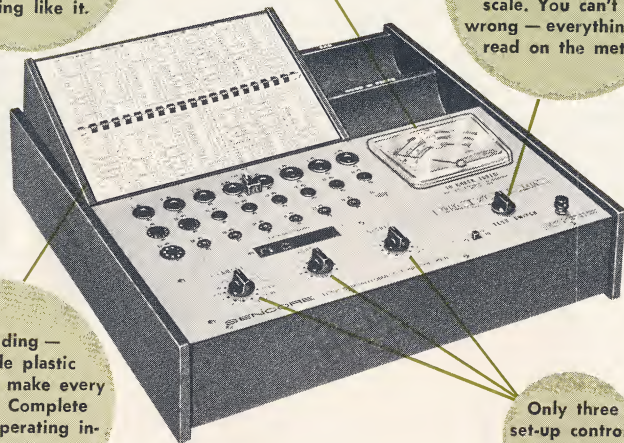

for you or your customer

Checks over 2000 tubes including Compactrons, Nu-vistors, 10 pins, Novars and all foreign tubes. There's nothing like it.

Large 6-inch meter for easy reading.

Semi-Automatic — turn function control to any test. Lighted arrow on meter automatically stops on right scale. You can't go wrong — everything is read on the meter.

Easy reading — all flexible plastic set-up charts make every test faster. Complete simplified operating instructions are on inside of cover.

Only three set-up controls simplify every test.

A PROFESSIONAL TUBE CHECKER FOR YOU OR YOUR CUSTOMER

It's a 3-way tube tester with the famous Sencore Mighty Mite circuits.

1. A real professional tester for your service counter or bench. 100 megohm grid leakage sensitivity, complete inter-element short test and cathode emission checks under full operating levels insure you of a true test every time. That's what made the Mighty Mite so famous. Servicemen coined the phrase "this checker won't lie to me."

2. Turn the TC131 around on the counter and your customer can use it as a self-service tube tester. Less controls, simplified design and exclusive automatic scale indication will increase that hard to get store traffic. One test with the TC131 will bring the customers back when they discover that they finally can get a truly professional check in your store.

3. Order the self-service sign and matching cabinet from Sencore and you have converted to a complete self-service tester.
